

Farid Hajareh Haghighi studied inorganic chemistry in Iran. His main field of study is synthesis and functionalization of metal and metal oxide nanoparticles and investigation of their biological applications. In the bioinorganic field, he participated in 8 ISI papers and two national patents. Furthermore, he possesses experiences in synthesis of concrete superplasticizers, specifically polycarboxylate copolymers and in this area of research, he has collaborated in two national patents. During his previous academic careers, he was awarded several honors such as the prominent student in national chemistry Olympiad and high-ranked student.
